

# Endeavour® 5 Navigator

## FAQ

### *How do I install Endeavour® 5?*

1. Insert the Endeavour®5 Navigator Version CD into the CD drive and wait for the Endeavour®5 Navigator Installation program to start.
  - If the installation program does not start, from the Start Menu select Run and type in **d:\setup.exe** where **d** is your system's CD drive.
2. Follow the instructions of the Endeavour®5 Navigator Installation program.
3. When the installation is complete, attach the dongle provided to the Parallel or USB port of your computer.
4. Refer to the FAQ: "How do I activate the USB drivers for Endeavour® 5 Navigator 5.5" for your version of Windows (XP or VISTA). \*\*
5. Double-click on the Endeavour®5 Navigator icon on your desk top to run the program.
6. Consult the user guide on how to install charts.

### **\*\* Attention: Parallel Port dongle users on Windows XP**

If the "**No Dongle Attached**" message appears when starting Endeavour®5 Navigator and a Parallel dongle is in fact attached then you will need to modify your Laptop's start up setup. This issue relates to the pre-installed version of Windows XP on the laptop, which has set the Parallel port exclusively for a printer.

For instructions on how to change the Parallel port default settings, follow the steps outlined in the FAQ "How do I fix my "No Dongle Is Attached" error on my Windows XP laptop" found at [www.hsa.com.au/support](http://www.hsa.com.au/support).
